WINTER ²⁰¹⁵/₂₀₁₆

FUNCTIONS

DuPont™ Sorona®
Sorona® renewably sourced fiber delivers superior performance benefits to today's fashions. Fabrics that use Sorona® are very soft, very strong and dry quickly. Sorona® helps fabrics stretch comfortably and retain their shape. And, it's made with plant-based ingredients. DuPont™ Sorona®. Designed for Performance. Derived from Nature.

PrimaLoft® SPORT
PrimaLoft® SPORT is a highly functional padding with excellent insulation qualities, which is extremely soft, light-weight, waterproof and breathable. Specially developed fibres form small air chambers which store body warmth very well, thus keeping the cold out. Thanks to a very thin surface structure the textile is waterproof, however it evacuates moisture from the skin to the fabric surface where it evaporates. Due to this, the skin will remain pleasantly warm.

Thinsulate™ INSULATION
The light-weight thermal insulation affords optimum protection against cold despite its minimum thickness. It even keeps you warm in damp or wet conditions. Thinsulate™ INSULATION offers excellent comfort and allows optimum room to move. It is extremely breathable, durable and easy-care.

BIONIC-FINISH®ECO
BIONIC-FINISH® was developed, following the example set by nature, 'learning from nature'. The textile is protected against water and dirt by a very thin crystalline structure. BIONIC-FINISH®ECO protects man and nature.

LYCRA®
Lycra® allows the fabric both to stretch significantly and to retain its shape. Fabrics and garments containing Lycra offer exceptional fit, comfort, freedom of movement and wrinkle recovery.

Softshell
Softshell with TPU membrane consists of three layers. Due to the microporous TPU membrane as middle layer the material is water-proof, wind-proof and breathable at the same time.

Water column
The ability to withstand water pressure without moisture penetrating into the material is given by the water column (mm). The minimum standard is a water column of 1,500 mm.

Breathability / Permeability to vapour
Functional textiles must have the ability to transport moisture from the skin to the fabric surface as fast as possible. Permeability shows how much steam in grams can evaporate on a surface of 1 m² within 24 hours. The higher this figure, the more breathable the textile is.

Taped seams
To avoid moisture penetrating into the fabric, seams and stitches can get taped. Taped seams are 100 % water-proof.
